All relevant units:

Hydrometallurgy is an important extraction method of metal mineral resources, and it is also an important field of metallurgical process industry. With the increasingly severe situation of resources and environment and the development of

low-grade complex mineral resources, new requirements have been put forward for the low-carbon, green and sustainable development of hydrometallurgical industry. In order to encourage clean production, prioritize energy conservation, emission reduction, and efficient resource utilization, the 7th International Conference of Hydrometallurgy will be held in Ganzhou, Jiangxi Province from December 6-8, 2024, which sponsored by the Nonferrous Metals Society of China, organized by Jiangxi University of Science and Technology, China GRINM Group Co., Ltd and Central South University and co-organized by Beijing University of Science and Technology, Northeast University, Kunming University of Technology, Institute of Process Engineering of Chinese Academy of Sciences, Wuhan University of Science and Technology, Xi'an University of Building Science and Technology, China GRINM Group Co., Ltd., Xiong'an Rare Earth Functional Materials Innovation Center Co., Ltd., Fuzhou University, Qinghai Institute of Salt Lakes of Chinese Academy of Sciences and Jiangxi Province Key Laboratory of Green and Low Carbon Metallurgy for Strategic Nonferrous Metals.

With the theme of "Low-carbon intelligent Metallurgy, High-quality Development", this conference will focus on the frontier of hydrometallurgical science and technology and high-quality development strategy. Relevant academicians, well-known experts and scholars at home and abroad, and experts from universities, research institutes and enterprises in the field of hydrometallurgy will be invited to make special reports on relevant national policies, academic research progress and engineering application examples, show the latest achievements, and discuss the collaborative innovation ideas of science and technology in related fields and industries. The aim is to promote the cooperation and exchange between the international hydrometallurgical academic circle and the experts and scholars in the related industrial fields, in order to promote the development of the hydrometallurgical process industry in China.

This conference will focus on academic achievements, papers, oral presentations, and poster sessions. Representatives from the hydrometallurgical industry and manufacturers of hydrometallurgical instruments and equipment are also warmly invited to attend. Outstanding papers will be selected during the conference, and we encourage experts and scholars to actively submit their full papers.

We wholeheartedly welcome scientists and researchers from relevant universities, research institutes, and enterprises to submit papers and participate in the conference.
